Defensive (anti-herbivory) Coloration in Land Plants Simcha Lev-Yadun

This book presents visual plant defenses (camouflage, mimicry and aposematism via coloration, morphology and even movement) against herbivores. It is mainly an ideological monograph, a manifesto representing my current understanding on defensive plant coloration and related issues. The book is not the final word in anything, but rather the beginning of many things. It aims to establish visual anti-herbivory defense as an integral organ of botany, or plant science as it is commonly called today. I think that like in animals, many types of plant coloration can be explained by selection associated with the sensory/cognitive systems of herbivores and predators to reduce herbivory. It is intended to intrigue and stimulate students of botany/plant science and plant/animal interactions for a very long time. This book is tailored to a readership of biologists and naturalists of all kinds and levels, and more specifically for botanists, ecologists, evolutionists and to those interested in plant/animal interactions. It is written from the point of view of a naturalist, ecologist and evolutionary biologist that I hold, considering natural selection as the main although not the only drive for evolution. According to this perspective, factors such as chance, founder effects, genetic drift and various stochastic processes that may and do influence characters found in specific genotypes, are not comparable in their power and influence to the common outcomes of natural selection, especially manifested when very many species belonging to different plant families, with very different and separate evolutionary histories, arrive at the same adaptation, something that characterizes many of the visual patterns and proposed adaptations described and discussed in this book. Many of the discussed visual defensive mechanisms are aimed at operating before the plants are damaged, i.e., to be their first line of defense. In this respect, I think that the name of the book by Ruxton et al. (2004) "Avoiding Attack" is an excellent phrase for the assembly of the best types of defensive tactics. While discussing anti-herbivory, I do remember, study and teach physiological/developmental aspects of some of the discussed coloration patterns, and I am fully aware of the simultaneous and diverse functions of many plant characters in addition to defense.

From reader reviews:

Lidia Hill:

The guide with title Defensive (anti-herbivory) Coloration in Land Plants has lot of information that you can study it. You can get a lot of help after read this book. That book exist new expertise the information that exist in this reserve represented the condition of the world now. That is important to you to understand how the improvement of the world. This kind of book will bring you with new era of the global growth. You can read the e-book on your own smart phone, so you can read the idea anywhere you want.

Charles Anthony:

People live in this new time of lifestyle always try to and must have the free time or they will get wide range of stress from both day to day life and work. So , when we ask do people have spare time, we will say absolutely sure. People is human not only a robot. Then we request again, what kind of activity do you have when the spare time coming to you actually of course your answer will probably unlimited right. Then ever try this one, reading guides. It can be your alternative inside spending your spare time, typically the book you have read is actually Defensive (anti-herbivory) Coloration in Land Plants.

Sophia Myers:

Playing with family in a very park, coming to see the marine world or hanging out with pals is thing that usually you might have done when you have spare time, then why you don't try point that really opposite from that. One activity that make you not experience tired but still relaxing, trilling like on roller coaster you already been ride on and with addition of information. Even you love Defensive (anti-herbivory) Coloration in Land Plants, you could enjoy both. It is good combination right, you still wish to miss it? What kind of hang-out type is it? Oh seriously its mind hangout people. What? Still don't have it, oh come on its named reading friends.

Frederick Cagle:

As we know that book is essential thing to add our information for everything. By a book we can know everything we wish. A book is a list of written, printed, illustrated or even blank sheet. Every year seemed to be exactly added. This e-book Defensive (anti-herbivory) Coloration in Land Plants was filled with regards to science. Spend your time to add your knowledge about your research competence. Some people has several feel when they reading a new book. If you know how big advantage of a book, you can sense enjoy to read a book. In the modern era like today, many ways to get book that you wanted.
