Turbulence in the Solar Wind (Lecture Notes in Physics)

Roberto Bruno, Vincenzo Carbone

Turbulence in the Solar Wind (Lecture Notes in Physics) Roberto Bruno, Vincenzo Carbone

This book provides an overview of solar wind turbulence from both the theoretical and observational perspective. It argues that the interplanetary medium offers the best opportunity to directly study turbulent fluctuations in collisionless plasmas. In fact, during expansion, the solar wind evolves towards a state characterized by large-amplitude fluctuations in all observed parameters, which resembles, at least at large scales, the well-known hydrodynamic turbulence.

This text starts with historical references to past observations and experiments on turbulent flows. It then introduces the Navier-Stokes equations for a magnetized plasma whose low-frequency turbulence evolution is described within the framework of the MHD approximation. It also considers the scaling of plasma and magnetic field fluctuations and the study of nonlinear energy cascades within the same framework. It reports observations of turbulence in the ecliptic and at high latitude, treating Alfvénic and compressive fluctuations separately in order to explain the transport of mass, momentum and energy during the expansion. Further, existing models are compared with direct observations in the heliosphere.

The problem of self-similar and anomalous fluctuations in the solar wind is then addressed using tools provided by dynamical system theory and discussed on the basis of available models and observations. The book highlights observations of Yaglom's law in solar wind turbulence, which is one of the most important findings in fully developed turbulence and directly related to the long-lasting and still unsolved problem of solar wind plasma heating.

Lastly, it includes a short chapter dedicated to the kinetic range of fluctuations, which has recently been receiving more attention from the space plasma community, since this is inherently related to turbulent energy dissipation and consequent plasma heating. It particularly focuses on the nature and role of the fluctuations populating this frequency range, and discusses several model predictions and recent observational findings in this context.

From reader reviews:

Frances Feist:

Within other case, little men and women like to read book Turbulence in the Solar Wind (Lecture Notes in Physics). You can choose the best book if you'd prefer reading a book. Given that we know about how is important any book Turbulence in the Solar Wind (Lecture Notes in Physics). You can add knowledge and of course you can around the world by the book. Absolutely right, simply because from book you can recognize everything! From your country until finally foreign or abroad you can be known. About simple matter until wonderful thing it is possible to know that. In this era, you can open a book or even searching by internet unit. It is called e-book. You can use it when you feel uninterested to go to the library. Let's learn.

Kimberly Dyson:

The book Turbulence in the Solar Wind (Lecture Notes in Physics) can give more knowledge and also the precise product information about everything you want. Exactly why must we leave a very important thing like a book Turbulence in the Solar Wind (Lecture Notes in Physics)? A number of you have a different opinion about guide. But one aim which book can give many data for us. It is absolutely right. Right now, try to closer with the book. Knowledge or info that you take for that, you may give for each other; you are able to share all of these. Book Turbulence in the Solar Wind (Lecture Notes in Physics) has simple shape but the truth is know: it has great and big function for you. You can seem the enormous world by wide open and read a guide. So it is very wonderful.

Lisa Alaniz:

People live in this new morning of lifestyle always try to and must have the free time or they will get large amount of stress from both day to day life and work. So , if we ask do people have free time, we will say absolutely without a doubt. People is human not a robot. Then we question again, what kind of activity are there when the spare time coming to you of course your answer will probably unlimited right. Then do you try this one, reading guides. It can be your alternative with spending your spare time, the particular book you have read will be Turbulence in the Solar Wind (Lecture Notes in Physics).

Rick Beard:

What is your hobby? Have you heard in which question when you got pupils? We believe that that problem was given by teacher for their students. Many kinds of hobby, All people has different hobby. And you also know that little person just like reading or as reading become their hobby. You have to know that reading is very important as well as book as to be the thing. Book is important thing to include you knowledge, except your teacher or lecturer. You get good news or update with regards to something by book. Different categories of books that can you take to be your object. One of them is actually Turbulence in the Solar Wind (Lecture Notes in Physics).
