Excerpt from A Handbook of Horse-Shoeing: With Introductory Chapters on the Anatomy and Physiology of the Horse's Foot

The friendly reception accorded to previous efforts encouraged the hope that a volume dealing with that less studied though scarcely less useful subject, Horse-shoeing, might find similar acceptance. To provide material, all the best known German, French, and Italian treatises have been ransacked, the leading English works referred to, and the information thus gained collated. Without any intention of disparaging the labors of other authors, the writer feels bound to confess that he has found no work of more practical and scientific value than Leisierug-Haitmann's masterly Handbook, "Der Fuss des Pferdes;" which, though in a much modified form, and with the addition of a large amount of new matter, has been adopted as the model and substantial basis for the present volume. Other sources of information are indicated in the Bibliography hereto attached.

The first nineteen pages, on the history of Horse-shoeing, have been translated, with little alteration, from Leisiering-Hartmann. In the section devoted to the Anatomy of the Foot, Professor Mettain has kindly contributed pages 61 to 65, and fig. 66 on page 106. The part dealing with practical Horse-shoeing has been almost entirely re-written, while many additions drawn from the writer's own experience or from Continental literature have been made in order to adapt the book to the requirements of English readers.

To Mr. Albert Wheatley is due one of the chief features of the book, viz., the large-sized blocks of horse-shoes printed on separate sheets, and the descriptions accompanying them.
