A Course in Formal Languages, Automata and Groups (Universitext)

Ian M. Chiswell

A Course in Formal Languages, Automata and Groups (Universitext) Ian M. Chiswell

This book is based on notes for a master's course given at Queen Mary, University of London, in the 1998/9 session. Such courses in London are quite short, and the course consisted essentially of the material in the first three chapters, together with a two-hour lecture on connections with group theory. Chapter 5 is a considerably expanded version of this. For the course, the main sources were the books by Hopcroft and Ullman ([20]), by Cohen ([4]), and by Epstein et al. ([7]). Some use was also made of a later book by Hopcroft and Ullman ([21]). The ulterior motive in the first three chapters is to give a rigorous proof that various notions of recursively enumerable language are equivalent. Three such notions are considered. These are: generated by a type 0 grammar, recognised by a Turing machine (deterministic or not) and defined by means of a Godel numbering, having defined "recursively enumerable" for sets of natural numbers. It is hoped that this has been achieved without too many arguments using complicated notation. This is a problem with the entire subject, and it is important to understand the idea of the proof, which is often quite simple. Two particular places that are heavy going are the proof at the end of Chapter 1 that a language recognised by a Turing machine is type 0, and the proof in Chapter 2 that a Turing machine computable function is partial recursive.

From reader reviews:

Larry Devries:

Why don't make it to be your habit? Right now, try to ready your time to do the important act, like looking for your favorite e-book and reading a e-book. Beside you can solve your trouble; you can add your knowledge by the book entitled A Course in Formal Languages, Automata and Groups (Universitext). Try to make book A Course in Formal Languages, Automata and Groups (Universitext) as your good friend. It means that it can to be your friend when you sense alone and beside that course make you smarter than ever before. Yeah, it is very fortunated for you. The book makes you much more confidence because you can know everything by the book. So , let me make new experience as well as knowledge with this book.

Donald Pate:

The feeling that you get from A Course in Formal Languages, Automata and Groups (Universitext) may be the more deep you searching the information that hide in the words the more you get considering reading it. It doesn't mean that this book is hard to know but A Course in Formal Languages, Automata and Groups (Universitext) giving you excitement feeling of reading. The author conveys their point in particular way that can be understood simply by anyone who read this because the author of this book is well-known enough. This book also makes your current vocabulary increase well. So it is easy to understand then can go with you, both in printed or e-book style are available. We suggest you for having this kind of A Course in Formal Languages, Automata and Groups (Universitext) instantly.

James Brown:

Beside this particular A Course in Formal Languages, Automata and Groups (Universitext) in your phone, it may give you a way to get closer to the new knowledge or information. The information and the knowledge you are going to got here is fresh from your oven so don't end up being worry if you feel like an old people live in narrow village. It is good thing to have A Course in Formal Languages, Automata and Groups (Universitext) because this book offers to your account readable information. Do you often have book but you seldom get what it's interesting features of. Oh come on, that wil happen if you have this in your hand. The Enjoyable option here cannot be questionable, just like treasuring beautiful island. Techniques you still want to miss it? Find this book along with read it from now!

Bruce Mull:

Don't be worry in case you are afraid that this book may filled the space in your house, you could have it in e-book way, more simple and reachable. This A Course in Formal Languages, Automata and Groups (Universitext) can give you a lot of good friends because by you taking a look at this one book you have thing that they don't and make a person more like an interesting person. This book can be one of a step for you to get success. This reserve offer you information that possibly your friend doesn't understand, by knowing more than various other make you to be great men and women. So , why hesitate? Let me have A

Course in Formal Languages, Automata and Groups (Universitext).
