The Defensive Effects of Retinoids in the Gastrointestinal Tract (Animal Experiments and Human Observations) Gyorgy Rumi, Alajos Par, Zoltan Matus, Gyula Mozsik

" The gastrointestinal mucosal injury can be produced by different known (bacteria, viruses) and unknown mechanisms (as in case of ileitis terminalis, ulcerative colitis, premalignant and malignant diseases). The number of patients suffering from these diseases increased significantly in the last decades. The aim of health care is to offer useful and successful pieces of advice for primary and secondary prevention, as well as for evidence based medicine in the treatment of these GI diseases. The retinoids are natural scavengers able to prevent tissue damage induced by different agents. This book analyzes their protective mechanisms in the GI tract. The book is offered for physiologists, chemists, biochemists, biologists, internists, gastroenterologists, oncologists."
